DMX3302 Engineering Mechanics

| Level | 3 |
|---------------------------------|--|
| Course Code | DMX3302 |
| Course Title | Engineering Mechanics |
| Credit value | 3 |
| Core/Optional | Core |
| Course Aim/s | To provide basic principles of Engineering Mechanics and its applications |
| Course Learning Outcomes (CLO): | At the completion of this course student will be able to: |
| | CLO1: Differentiate between the kinematics and kinetics in particle and rigid body dynamics. |
| | CLO2: Apply principles of dynamics to analyse two and three dimensional motion of particles and rigid bodies |
| | CLO3: Analyze distributed force systems and structures with the aid of principles of statics. |
| | CLO4: Describe the effects of co-planar external loads subjected by beams, and draw shear force and bending moment diagrams. |
| | CLO5: Use phenomenon of friction in the analysis of static and dynamic of rigid body problems. |
| | CLO6: Demonstrate basic knowledge of free & forced vibration of a particle & rigid bodies. |
| Content | Outline Syllabus: |
| | Unit 01: Dynamics of Particles Unit 02: Dynamics of Rigid Bodies Unit 03: Statics Unit 04: Shear Force & Moment Equations and Diagrams Unit 05: Friction Unit 06: Mechanical Vibrations |
| | Laboratory work: |
| | Determine stress – strain relationship of different materials Determine the forces in loaded frames Measurement of friction coefficients in different materials Determine the centre of gravity of different shapes |
